Fund Aim

The Company's investment policy is to invest in shares issued by small and mid ('SMID') sized companies with a market capitalisation (at the time of investment) of between £500 million to £15 billion on a long-term, global basis. The Company's approach is to be a long-term investor in its chosen stocks. It will not adopt short-term trading strategies. Accordingly, it will pursue its investment policy by investing in approximately 25 to 40 companies.

The Investment Manager focuses on investing in those companies it believes can compound in value over many years. It seeks to achieve this by selecting companies that have an established track record of success, such as having already established a dominant market share in their niche product or service or having brands or patents which others would find difficult, if not impossible, to replicate. The Investment Manager believes such SMID sized companies tend to out-perform large companies and that there is also an investment opportunity to take advantage of greater discrepancies between the share price and valuation of SMID sized companies, in part due to lighter research coverage and less information being available on them. SMID sized companies tend to have higher expected returns but also higher expected risk, defined as price volatility (a measure of how much its price moves over time), when compared to larger companies. However, adding a small and mid cap portfolio to a large cap portfolio can raise expected returns without increasing risk, due to the different risk and return characteristics that SMID sized companies provide.

The Investment Manager seeks to invest in SMID sized companies that exhibit strong profitability that is sustainable over time and generate substantial cash flow that can be reinvested back into the business. Its strategy is not to overpay when buying the shares of such companies and then do as little dealing as possible in order to minimise the expenses of the Company, allowing the investee companies' returns to compound for Shareholders with minimum interference.

The Investment Manager looks to avoid companies that are heavily leveraged or forced to rely upon debt in order to provide an adequate return, as well as sectors and industries that innovate very quickly and are rapidly changing. It instead focuses on companies that have exhibited an ability to continue outperforming competitors and will look for companies that rely heavily on intangible assets in industries such as information technology, health care and consumer goods. The Company's investments will be long-term and the Investment Manager will not be forced to act when market prices are unattractive.

Portfolio Comment for March 2022

During the month, we exited our position in A.O. Smith due to some concerns over increasing competition and completed the purchase of a position in Addtech, a diversified distributor of industrial products, based in Sweden, with a long record of supplementing organic growth with bolt-on acquisitions at attractive returns. The top 5 contributors in the month were Verisk Analytics, Technology One, Cognex, Qualys and Domino's Pizza Enterprises. The top 5 detractors were Simcorp, Wingstop, Ambu, IPG Photonics and Rightmove.

The OCF (Ongoing Charges Figure) is the total expenses paid by the fund (excluding bank overdraft interest), annualised, against its average net asset value. The OCF will fluctuate as the average net assets and costs change. The OCF is updated following the publication of accounts for the periods ending 30th June and 31st December.

* The PTR (Portfolio Turnover Ratio) has been calculated in accordance with the methodology laid down by the FCA. This compares the total share purchases and sales less total shares issues and redeemed with the average net asset value of the fund.

N.B. When a position is being built for the fund the company name is not disclosed in factsheet data.
